DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 6 and 7 are rejected under 35 U.S.C. 102(e) as being anticipated by Tan (6,075,576).

Regarding claim 6, Tan discloses an image decoding device which decodes an encoded bit stream formed by encoding images for each object, comprising:

display speed information decoding means for decoding object display speed information from said encoded bit stream (col.6, ln.55-60 discloses the VOP time increments, ie. speed is equivalent to the reciprocal of an increment or $\text{speed} = 1 / \text{increment}$ as any one of ordinary skilled would recognize; also see col.7, ln.34-50 where the decoding of the display speed information or the reciprocal of the VOP time offset is processed, ie. $1 / \text{VOP time offset} = \text{display speed}$, since VOP time offset is in the same units as the VOP time increment); and

control means for controlling the reconstruction of said encoded images encoded for each object, based on said decoded object display speed information (see figure 10 where Tan discloses the flow chart or a control means that illustrates how the

reconstruction of said images are encoded for each video object depending on the display speed information or the reciprocal of the VOP time offset).

Note claim 7 has similar corresponding elements.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 8-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tan (6,075,576) in view of Suzuki (6,031,575).

With regards to claims 8-11, Tan discloses the display speed information decoding means and control means. Tan may not disclose the decoded object display speed is fixed or variable. However, Suzuki teaches plural VOPs at different VOP rates, ie. display speed (col.47, ln.65 to col.48, ln.10). It is understood different rates have different time intervals. The fact that the time axis is graduated into different time intervals is based on the incoming VOP rates. It follows that Suzuki teaches variable VOP rates. It should also be understood that if the VOP rates are not changing, it is considered fixed. Thus, both fixed and variable display rates are met by Suzuki.
